GitHub: Ritik72532 — LinkedIn: Ritik Aryan — Email: ritikaryan17@gmail.com — Phone: +91 6204469332

Summary

Computer Science Engineering student with strong problem-solving skills and a solid foundation in Data Structures, Algorithms, Software Development, and Web Technologies. Skilled in JavaScript, React.js, Node.js, MongoDB, SQL, and REST APIs, with hands-on experience building scalable and user-friendly applications. Quick learner with a passion for technology, clean code, and developing efficient software solutions in collaborative environments.

Education

G.L. Bajaj Institute of Technology and Management , Greater Noida, India	2026
Bachelor of Technology in Computer Science and Engineering	CGPA: 6.96 / 10.0
Gyansthal School , Patna, India	2022
CBSE (Class XII)	Percentage: 76%
Kendriya Vidyalaya Sangathan , Patna, India	2020
CBSE (Class X)	Percentage: 75%

Technical Skills

Programming Languages: Java, C++, Python, SQL
Frontend Development: HTML, CSS, JavaScript, React.js
Backend Development: Node.js, Express.js, RESTful APIs, JWT Authentication, Role-Based Access Control (RBAC)
Databases: MongoDB, MySQL, PostgreSQL
Core Computer Science: Data Structures & Algorithms, OOP, Operating Systems, DBMS, Data Cleaning
Artificial Intelligence / Machine Learning: Machine Learning fundamentals, Data Analysis basics
Tools & Technologies: Git, Stripe API, Socket.io, Postman

Projects

SmartTag – QR-Based Lost & Found System (Production Ready)	Live
Tech Stack: React.js, Node.js, Express.js, MongoDB, Firebase Auth, JWT, REST APIs	
- Engineered a full-stack QR-based lost & found platform enabling secure item recovery without exposing personal contact details. - Implemented Google OAuth (Firebase) and JWT-based authentication with protected routes and role-based access control. - Designed dynamic QR generation system linking each item to a unique public scan page using SEO-friendly slugs. - Built secure communication flow allowing finders to contact owners via masked details, ensuring user privacy. - Developed responsive and modern UI with optimized state management, improving user experience across mobile and desktop. - Architected scalable REST APIs with modular structure (controllers, routes, models) and robust error handling. - Integrated production deployment using Vercel (frontend) and Render (backend), resolving real-world issues like CORS, environment configs, and API routing. - Optimized performance by reducing redundant API calls and improving backend response time for item operations.	

TravelNest – Travel Booking Backend System	GitHub
Tech Stack: Node.js, Express.js, MongoDB, JWT, Stripe	
- Designed and developed a scalable backend system simulating real-world flight & hotel booking workflows. - Integrated Stripe payment gateway with secure transaction validation and order verification logic. - Designed optimized MongoDB schemas with indexing and aggregation pipelines to handle high-volume booking queries efficiently. - Implemented secure JWT-based authentication and Role-Based Access Control (RBAC). - Implemented pagination, filtering, and rate-limiting mechanisms for API performance optimization. - Improved query efficiency for faster reporting and analytics. - Reduced API response time by optimizing query execution and improving schema structure.	

Certifications

- Data Science & Machine Learning — YBI Foundation (2023)
- Cyber Security Fundamentals — Cisco (2025)

Additional Information

- Actively practicing coding problems and strengthening problem-solving skills through Data Structures and Algorithms.
- Continuously learning new technologies through projects and online resources.
- Interested in building high-performance distributed systems and backend-heavy applications.
- Built and deployed multiple full-stack applications using React.js, Node.js, Express.js, MongoDB, and REST APIs.
